PROFESSIONAL SUMMARY

Motivated first-year Computer Science student at Nile University specializing in Front-End Development. Currently enhancing skills in JavaScript and React to build modern, responsive, and user-centric web applications. Dedicated to creating clean, intuitive interfaces and eager to contribute to real-world projects to further develop technical expertise.

PROJECTS

Maze Solver Robot Car | C++, C

May 2025

- Developed an autonomous robot car programmed in C++ to navigate and exit complex mazes efficiently.
- Engineered an autonomous robot car capable of solving 10+ complex maze patterns using a custom pathfinding algorithm.
- Achieved over 90% accuracy in maze completion during testing, with average completion time under 30 seconds per maze.
- Integrated real-time ultrasonic sensor feedback to dynamically avoid 15+ obstacle configurations.

GPA Calculator | C++, Algorithms

May 2025

- Created a C++ application to calculate semester-wise and overall GPA based on user input of grades and credits.
- Included input validation for grades and credits to ensure accurate calculations.
- cumulative GPA computation, enhancing user experience through a clear and friendly command-line interface.

PlayStation World 🎮 | Front-End Project

Jan 2025

- Developed a fully responsive and visually engaging website for the PlayStation gaming community, consisting of 8+ major sections including Games, Features, Services, Top Players, and Pricing.
- Showcased detailed content on 7+ popular PlayStation games (e.g., FIFA 24, GTA VI, Spider-Man) with direct links to official sources.
- Integrated an interactive booking system with a live countdown timer to enhance user engagement and simulate real-world event scheduling.
- Achieved 100% cross-device compatibility using clean HTML and CSS for responsive layout design.

Kasper Website 🎨 | Front-End Project

Oct 2024

- Designed a fully responsive website using HTML5 and CSS3, achieving 95%+ compatibility across mobile and desktop devices based on cross-browser testing.
- Optimized page load time by 20% through efficient CSS structuring and image compression techniques.
- Created this project to strengthen front-end development skills and improve UI/UX understanding.

Leion Website 🎨 | Front-End Project

Sep 2024

- Developed a clean, visually polished website using pure HTML and CSS.
- Focused on smooth section transitions and a strong layout structure with Flexbox and Grid.
- Ensured full responsiveness and cross-device compatibility for an optimal user experience.

SKILLS

Web Development: HTML, CSS, Responsive Design, UI/UX principles, API Integration, JavaScript and React (currently learning)

Languages: C++, C, Python

Tools and Technologies: Git, GitHub, Algorithms

Soft Skills: Time Management, Team Collaboration, Problem Solving

Developer Tools: VS Code, Cursor, Google Cloud Platform

Languages: English, Arabic, and German (Beginner)
